

ACADEMIC REGULATIONS & COURSE STRUCTURE

**Common
For**

**SOIL MECHANICS & FOUNDATION ENGG.
AND
GEOTECHNICAL ENGINEERING**

(Applicable for batches admitted from 2016-2017)

**JAWAHARLAL NEHRU TECHNOLOGICAL UNIVERSITY: KAKINADA
KAKINADA - 533 003, Andhra Pradesh, India**

I Semester

S. No.	Subject	L	P	Credits
1	Advanced Mathematics	4	-	3
2	Advanced Soil Mechanics	4	-	3
3	Foundation Engineering – I	4	-	3
4	Ground Improvement Techniques	4	-	3
5	Elective – I I. Designing with Geosynthetics II. Soil-Foundation Interaction III. Critical State Soil Mechanics	4	-	3
6	Elective – II I. Earth Dams II. Rock Mechanics III. Remote Sensing and Geographical Information Systems	4	-	3
7	Advanced Geotechnical Lab	-	3	2
Total Credits				20

II Semester

S. No.	Subject	L	P	Credits
1	Foundation Engineering – II	4	-	3
2	Earth Retaining Structure	4	-	3
3	Soil Dynamics & Machine Foundations	4	-	3
4	Construction in Expansive Soils	4	-	3
5	Elective – III I. Pavement Analysis, Design and Evaluation II. Construction Planning and Methods III. Geotechnical Earth Quake Engineering	4	-	3
6	Elective – IV I. Geo-Environmental Engineering II. Numerical Methods in Geotechnical Engineering III. Finite Element Method	4	-	3
7	Computational Methods in Geotechnical Engineering Lab	-	3	2
Total Credits				20

III Semester

S. No.	Subject	L	P	Credits
1	Comprehensive Viva-Voce	--	--	2
2	Seminar – I	--	--	2
3	Project Work Part – I	--	--	16
Total Credits				20

IV Semester

S. No.	Subject	L	P	Credits
1	Seminar – II	--	--	2
2	Project Work Part - II	--	--	18
Total Credits				20

I Year I Semester	ADVANCED MATHEMATICS	L	P	C
		4	0	3

Common for M.Tech.
(Structural Engineering, Soil Mechanics & Foundation Engineering,
Geotechnical Engineering and Transportation Engineering)

UNIT-I

Applied partial Differential Equations: One-dimensional Heat equation Cartesian, cylindrical and spherical coordinates (problems having axi-symmetry). Two-dimensional Laplace Equation in Cartesian, cylindrical and spherical coordinates (problems having axi-symmetry) – Analytical solution by separation of variables technique.

UNIT-II

Numerical solutions to Heat and Laplace Equations in Cartesian coordinates using finite – differences. Implicit methods, Crank NicholSEN Method, Jacobi Method, Guass Seidal method.

UNIT-III

Applied Statistics: Regression and correlation analysis – Method of Least squares – Curve fitting – Curvilinear Regression – Non-linear curves – correlation coefficient – Correlation of grouped bi-variate data – coefficient of determination Multiple Regression – partial Regression coefficients.

UNIT-IV

Tests of significance – Analysis of variance for regression – Multiple correlation coefficients – Multiple linear regression with two independent variables.

UNIT-V

Linear Programming Problem Formation, Graphical Method, Simplex method, artificial variable method-Big-M method-Two Phase Method. Non Linear Programming Problem Gradient method, Steepest Ascent Descent Methods.

TEXT BOOKS

1. Solutions of Partial Differential Equations” – Duffy, D.G. CBS Publishers, 1988
2. Introductory Methods of Numerical Analysis – Sastry, S.S. Prentice-Hall, 2nd Edition, 1992
3. Basic Statistics – Agarval, B.L., Wiley 1991, 2nd edition.
4. Operations Research – Hamdy A, Taha.
5. Optimization Techniques.- S.S.Rao:.

I Year I Semester	ADVANCED SOIL MECHANICS	L	P	C
		4	0	3

UNIT- I

Analysis of Stress: Concept of Stress – Body force, Surface force and stress vector – The state of stress at a point – Normal and shear stress components – Rectangular stress components - Stress components on an arbitrary plane – Digression on Ideal fluid – Equality of Cross shears - Cauchy’s formula – Equations of Equilibrium – Transformation of coordinates – Plane state of stress. Principal Stresses – Stress Invariants – Particular cases – Mohr’s circle for the Three – dimensional state of stress – Mohr’s stress plane – Plane of maximum shear – Octahedral stresses – Pure shear decomposition into Hydrostatic and pure shear states.

UNIT- II

Analysis of Strain – Deformation – Deformation in the Neighborhood point – Change in length of a linear element – Change in length of a linear element – Linear component – Rectangular strain components – The state of strain at a point – Shear strain components – Change in direction of a linear element - Cubical Dilation – Change in the angle between Two line elements – Principal Axes of strain and principal strains – Plane state of strain – Compatibility condition – Strain deviator and its Invariants, Stress – Strain relations – Stress – Strain relations for isotropic materials – Modules of Rigidity – Bulk modules.

UNIT- III

Permeability and Seepage: Darcy’s law – Validity of Darcy’s Law, Coefficient of Permeability in the Field - Equation of Continuity – Use of Continuity Equation for Solution of Simple flow problems – Flow nets – hydraulic uplift force under structure – Flow nets in anisotropic material – Construction of flow nets for hydraulic structures on non-homogeneous sub soils – Directional variation of permeability in anisotropic medium – Seepage through earth dams – Entrance, discharge and transfer condition of line of seepage through earth dams. Flow net construction for earth dams – filter design.

UNIT- IV

Consolidation: Mechanism of consolidation – Primary consolidation
– Stress history – Pre-consolidation pressure – Terzaghi’s one-dimensional consolidation theory and equation – Solution by Fourier series and finite difference methods – Determination of coefficient of consolidation – U versus T relationship for different forms of initial excess pore water pressure distribution – Degree of consolidation under time – dependent loading – secondary compression.

UNIT- V

Shear strength: Principle of effective stress – Measurement of strength parameters - Strength tests based on drainage conditions – Skempton’s pore pressure coefficients – Stress paths – Shear strength of cohesionless soils – Strength and deformation behaviour – Dilatancy – Critical void ratio – Liquefaction of soils – Shear strength of saturated cohesive soils – Triaxial testing. Normally and over consolidated clays.

6. “Elements of soil mechanics” by G.N. Smith., B.S.P. Professional Books, Oxford, London.

I Year I Semester	FOUNDATION ENGINEERING - I	L	P	C
		4	0	3

UNIT-I

Soil Exploration – Importance, Terminology, - Geophysical methods. Borings - Location, spacing and depth, Methods of Boring including Drilling, Stabilization of Boreholes, – Methods of sampling -Types of Samples and Samplers- Cleaning of Bore holes, Preservation, Labeling and Shipment of Samples - Design Considerations of Open Drive Samplers.

UNIT- II

Field tests - The Standard Penetration Test – its limitations and Corrections – Cone Penetration Test – Field Vane Shear Test – Bore- Hole Shear Test – Dilatometer Test – Pressure Meter test – Planning of exploration program — Preparation of Soil Report – Bore log.

UNIT- III

Shallow Foundations –Bearing capacity – General Bearing Capacity Equation, Meyerhof’s, Hansen’s and Vesic’s Bearing Capacity Factors - Bearing Capacity of Stratified Soils - Bearing Capacity Based on Penetration Resistances - Safe Bearing Capacity and Allowable Bearing Pressure.

UNIT-IV

Types and choice of type. Design Considerations including Location and Depth, Proportioning of Shallow Foundations- Isolated and Combined Footings and Mats - Design Procedure for Mats. Floating Foundation- Fundamentals of Beams on Elastic Foundations.

UNIT-V

Settlement Analysis – Elastic settlement in granular soils – Meyerhof’s, De Beer and Marten’s and Schemertmann’s equations-Elastic settlements of surface and subsurface footing in clays – ~~Skempton and Bjerrum’s pseudo three-dimensional~~ approach to consolidation settlement, settlement from in-situ tests. Tolerable settlements.

4. Foundation Analysis and Design by J.E. Bowles McGraw Hill Publishing Co.,
5. Analysis and Design of sub structures by Swami Saran
6. Design Aids in Soil Mechanics and Foundation Engineering by Shanbaga R. Kaniraj, Tata McGraw Hill.

7. Foundation Design and Construction by MJ Tomlinson – Longman Scientific
8. A short course in Foundation Engineering by Simmons and Menzes - ELBS

I Year I Semester	GROUND IMPROVEMENT TECHNIQUES	L	P	C
		4	0	3

UNIT- I

Introduction – Need for Engineering Ground – Classifications of Ground Modification Techniques – Suitability, Feasibility and Desirability. Densification of cohesionless soils – deep Compaction – Vibrofloation – Vibro Composer method Blasting – Densification at Ground. - Vibrocompaction - Heavy Tamping, Stability of foundation trenches and surrounding structures through soil Nailing.

UNIT-II

Stabilisation- Mechanical Stabilisation, Lime Stabilisation, Cement Stabilisation, Bitumen Stabilisation, Thermal Stabilisation and Chemical Stabilisation.

UNIT:-III

Dewatering and Grouting: - Dewatering methods – open sumps and ditches – gravity flow wells – Vacuum dewatering – Electro – kinetic dewatering – electrosmosis - Overview of grouting - Suspension grouts – Solution grouts – Methods of grouting – Grouting applications – Dams, Tunnels, Shafts and drifts, excavations.

UNIT-IV

Improvement of Cohesive soils – Preloading Soil Replacement – Radial Consolidation – Vertical and Radial Consolidation - Vertical Drains – Sand Drains – Effect of Smear – Sandwicks – Band drains – Dynamic Compaction.

UNIT-V

Stone Columns – Methods of installation of Stone Columns – Load shared by stone columns and the stabilized ground – uses of stone columns Lime columns and granular trenches – Installation – Improvements expected on Soil behavior. In situ ground reinforcement – ground anchors – types – Components and applications – uplift capability.

I Year I Semester	L	P	C
	4	0	3

**DESIGNING WITH GEOSYNTHETICS
(ELECTIVE – I)**

UNIT-I

Geosynthetics and Properties and Testing Methods: Introduction to Geosynthetics – Basic description – History – Manufacturing methods
– Uses and Applications. Properties and Testing methods of Geotextiles
– Geogrids – Geomembranes – Geocomposites.

UNIT-II

Geotextiles: Designing for Separation – Reinforcement – Stabilization
– Filtration – Drainage and Moisture barriers.

UNIT-III

Geogrids: Designing for Reinforcement – Stabilization – Designing Gabions – Construction methods – Design of retaining walls.

UNIT-IV

Geomembranes: Survivability Requirements – Pond Liners – Covers for Reservoirs – Canal Liners – Landfill Liners – Caps and closures – Dams and Embankments.

Unit-V

Geocomposites: Geocomposites – An added advantage – Geocomposites in Separation – Reinforcement – Filtration – Geocomposites as Geowebs and Geocells – Sheet drains – Strip drains and Moisture barriers.

REFERENCE:

1. “Designing with Geosynthetics by Robert M. Koerner Prantice Hall, Eaglewood cliffs, NJ 07632.
2. “Construction and Geotechnical Engineering using Synthetic Fabrics” by Robert M. Koerner and Joseph P. Welsh. John Willey and Sons, New York.
3. “Engineering with Geosynthetics”, by G. Venkatappa Rao and GVS Suryanarayana Raju – Tata McGraw Hill Publishing Company Limited
– New Delhi.
4. “Foundation Analysis and Design” by J.E. Bowles McGraw Hill Publications.

SOIL – FOUNDATION INTERACTION (ELECTIVE – I)

UNIT-I

Introduction to Soil – Foundation Interaction Problems – Contact Pressure Distribution – Idealized Soil Behaviour, Foundation Behaviour, Interface Behaviour, Analytical techniques.

UNIT-II

Idealized Soil Response Models for the Analysis of Soil – Foundation Interaction – Elastic Models for Soil Behaviour, Cointler model, Elastic Continuous Model, Two –Parametric Elastic Models – Elastic – Plastic and Time Dependent Behaviour of Soil Masses.

UNIT-III

Plane Strain Analysis of an Infinite plate and an Infinitely Long. Beam; Bernoulli – Euler Beam Theory and its Modifications – Effect of Shear Deformations.

UNIT-IV

Finite Beams on a Winkler Medium – Method of Initial Parameters – Method of Super Position – Strain Energy Method.

UNIT-V

Analysis of finite plates – Axi Symmetric Loading of a Circular Plate – Circular Plate Resting on Winkler Medium – Circular Plate Resting on a Two – parameter elastic.

REFERENCE:

1. Analytical and computer methods in foundation engineering, JE Bowles, McGraw Hill publications.
2. Foundation analysis and design, JE Bowles, McGraw Hill Publications.
3. Foundation analysis by RF Scott, Printice Hall
4. Hytenyi, Beams on Elastic Foundations – university of Michigan Press.
5. Elastic Analysis of soil – Foundation Interaction. APS Selvadurai – Elsevier

CRITICAL STATE SOIL MECHANICS (ELECTIVE – I)

UNIT-I

Stress and strain – Stress and Strain Paths and Invariants – Critical State line – families of Undrained and Drained tests – Undrained and Drained planes – The Roscoe surface – Rosco surface as a state boundary surface.

UNIT-II

Behaviour of Over Consolidated Samples – Hvorslev Surface – Critical State Line – Complete State Boundary surface – Volume Changes and Pore Pressure changes – Behaviour of Sands – Effect of Dilatation.

UNIT-III

Soil behaviour Before failure – Plasticity of Soils – Cam clay - Power in Cam – Clay – Critical States and Yielding of Cam – clay, Compression of Cam – Clay.

UNIT-IV

Routine Soil Tests and the Critical State Model – Mohr – Coulomb Failure Criterion – One – dimensional compression – Undrained Shear Strength – General states of stress – Pore pressure Parameters – Interpretation of Index Test Data.

UNIT:-V

Test paths in consolidation and shear testing — Soil Parameters for Design – Choice of Analysis – Methods – Choice of Strength Parameters.

REFERENCES:

1. The Mechanics of Soils by J.H. Atkinson and P.L. Bransby & ELBS McGraw – Hill Book Co.,
2. Critical State Soil Mechanics – A. Sehofield and P. Wroth McGraw Hill Book Co.
3. Guide to soil Mechanics – Bolton seed, Mac millan Press Ltd., London.

I Year I Semester	L	P	C
	4	0	3

**EARTH DAMS
(ELECTIVE – II)**

UNIT I

BASIC CONCEPTS AND MISCELLANEOUS TOPICS.: Evolution – Types of Dams – Earthfill Dams – Rockfill Dams – Selection of Type of Dam – Site Topography – Foundation Conditions – Basic Design Requirements – Crest Width – Freeboard – Definition – Wind Set-up
 – Wave Height — Causes of Failure and Deterioration of Dams – Design Investigations – Fill Material – Foundations – Design Studies
 – Hydraulic Fill Dams – Tailings Dams.

UNIT II

SEEPAGE THROUGH DAM SECTION AND ITS CONTROL: General
 – Flow Nets – Definitions - Casagrande’s Method – Flow Net for Anisotropic Section – Quantity of Seepage through Dam Section – Basic Equations – Stello’s Seepage Charts - Quantity of Seepage through Foundation – Seepage Control – Filters – Filter Criteria – Filters for Silts and Clays – Critical and Non-Critical Filters – Broadly Graded Soils – Core Material – Core Inclination – Core Thickness – Drainage – Pervious Downstream Shell – Chimney Drains – Rock Toe and Drains – Use of Geotextiles as Filter Material.

UNIT III

CONTROL OF SEEPAGE THROUGH FOUNDATIONS: General Considerations – Trench Cut-off – Partial Cut-off – General Considerations – Design of Upstream Blanket – Horizontal Drainage Blanket – Relief Wells – General Details – Design of Relief Wells – Drainage Trenches - Downstream Loading Berm – Cut-off Walls – Slurry Trench Cut-off Walls – Concrete Cut-off Walls or Diaphragms
 – Grouted Cut-offs – General Details – Suspension Grouts – Chemical Grouts – Performance of Seepage-Reducing Measures – Location of Cut-off – Design of Slope Protection – Dumped Riprap – Hand-placed Riprap – Soil-Cement Slope Protection – Downstream Slope Protection–

UNIT IV

STABILITY ANALYSIS: Introduction – Critical Slip Surface – Shear Strength Under Different Test Conditions – Shear-Strength Tests – Test Conditions for Stability Analysis – Pore Pressures under Different Test Conditions – End-of-Construction – Drawdown Pore pressures

– Steady Seepage – Factor of Safety – Stability Analysis – Method of Slices – Equilibrium Requirements – Fellenius Method – Simplified Bishop Method – Taylor – Lowe Force-Equilibrium Method – Spencer’s Method – Janbu’s Method – Equilibrium Equations – Working Formulae – Interslice Forces – Factor of Safety Along Interfaces – Iteration Procedure – Simplified Janbu’s Method – Morgenstern – Price Method – Wedge Method – Appraisal of Different Methods of Stability Analysis.

UNIT V

INSTRUMENTATION: – Purpose - Types of Instruments and Brief Description – Installation – piezometers — Casagrande and Vibration wire — Settlement gauges – Inclined meters.

REFERENCE:

1. Earth Dams by HD Sharma
2. Earth and Rockfill Dams HD Sharma & Bharat Singh

ROCK MECHANICS (ELECTIVE – II)

UNIT-I

Introduction and Classification of Rocks: Development of Rock Mechanics: Applications of Rock Mechanics – Rock Vs. Soil: Engineering Classification of intact rock and fissured rocks: Classification based on Structural features – Rock quality Designation Number and Velocity Ratio Methods.

UNIT-II

Strength and Deformation Behaviour of Rocks and Failure Theories: Typical Stress – Strain Curves – Static and Creep Test; Strength of rock – Unconfined Shear Strength and Triaxial Shear Strength of Rocks; Creep behaviour of Rocks; rock fracture and friction; Coulomb – Navier; Mohr's and Griffith Theory and its Modification (General discussion only – derivation of equation not included.)

UNIT-III

Laboratory Testing of Rock Samples – Factors affecting test results sampling procedure and preparation of specimens; Tensile Tests – Direct, Indirect and Flexural tests; Uniaxial compression test; Unconfined and Triaxial shear tests; Determination of Elastic constants – Pulse generation and Resonant Frequency of a vibrating bar methods.

UNIT-IV

In-Situ Testing of Rock masses Plate –bearing test, Pressure Tunnel test; Flat Jack Test; Permeability of Rock and rock masses; Pore water pressure in rocks.

UNIT-V

Methods of Improving the Properties of Rock Masses – Pressure Grouting and Rock bolting. — Design of simple – Openings in competent rocks; laminated rocks and rocks containing planes of weakness. (Distribution of stresses around simple openings discussion only without derivation)

REFERENCE:

1. Jaeger, J.C., and Cook, N.G.W. – Fundamentals of Rock Mechanics
2. Stagg, K.C. and Zienkiewicz., O.C – Rock Mechanics in Engineering Practice. Obert, L & Duvall, W.L. – Rock Mechanics and the Design of Structures in Rock. Soil.

REMOTE SENSING AND GEOGRAPHICAL INFORMATION SYSTEMS (ELECTIVE – II)

UNIT-I

Remote Sensing : Definition, Elements involved in Remote Sensing, Ideal Vs Real Remote Sensing, Characteristics of Real Remote Sensing System, Nature of Electromagnetic Radiation. The Electromagnetic Spectrum, Remote Sensing Terminology and Units, Energy Interaction with Earth Features, Vegetation, Soils and Water bodies, Energy interaction in the atmosphere. Spatial Resolution, Spectral Resolution and Radiometric Resolution, Characteristics of Various sensors and satellites: LANDSAT, SPOT, IRS, ERS.

UNIT-II

Introduction to GIS: What is GIS, Components of GIS, Overview of GIS, Examples of GIS application for civil engineering, Using a GIS for Decision making under uncertainty, Geo-referenced data.

Data Input/Output: Keyboard entry, Manual Digitizing, Scanning, remotely sensed data, Existing Digital data – Cartographic database, Natural resources data sets, Digital elevation data and census related data sets, Data output devices.

UNIT-III

Data Quality: Components of data Quality, Sources of error. Data management: Data Base approach, Three classic data models (Hierarchical network Relational data models), Query languages, Nature of Geographic data.

Spatial data models: Raster and Vector data models. Data bases for GIS managing Spatial and attribute data together – Organizing Geographic Information within a DBMS, Limitations and Practical Approaches.

UNIT-IV

GIS Analysis functions : Organizing data for analysis, Classification of GIS Analysis function, Maintenance and Analysis of Spatial data – Transformations, Edge matching and editing, Maintenance and analysis of non-spatial attribute data – Editing and query functions.

UNIT-V

GIS analysis functions for Integrated analysis of spatial and attribute data: Retrieval and Classification functions, Overlay operations, Neighborhood operations, Connectivity function, Output, Formatting

– Map annotation, Text pattern and line styles, Graphic symbols, Cartographic modeling by GIS, analysis procedure with an example.

TEXT BOOKS:

1. Principles of Geographic Information Systems by Peter A. Burrough and Rachael A. McDonnell – Oxford University Press.
2. Principles of Remote Sensing by Paul J Curran Geographic Information Systems, - A Management Perspective by STAN ARONOFF, Published by WDL Publications, Ottawa, Canada.
3. Michael Hord. Remote Sensing Methods and Applications, John Wiley.
4. Remote Sensing and Geographical Information Systems – 2nd Edition by M. Anji Reddy.

REFERENCE BOOKS:

1. Remote sensing and Image Interpretation by LILESAND and KIEFER, Published by John Wiley and sons.
2. Fundamental of GIS by MICHAEL N DEMERS Published by John Wiley & Sons Inc.

I Year I Semester	ADVANCED GEO-TECHNICAL LABORATORY	L	P	C
		0	3	2

List of Experiments:

1. Classification of Soil
2. Compaction Test
3. CBR
4. Triaxial tests: UU – test
5. Triaxial tests: CU – test
6. Direct shear test – Critical void ratio determination
7. Consolidation test
8. Geotextiles – Grab test I) large width ii) narrow width
9. Geotextiles – Permeability.
10. Demonstration of Plate Load Test
11. Demonstration of Field CBR Test

I Year II Semester	L	P	C
	4	0	3

UNIT-I

Pile Foundations-Classification of Piles-Factors influencing - Choice-Load Carrying Capacity of Single Piles in Clays and Sands Using Static Pile Formulae- α - $\hat{\alpha}$ - and λ - Methods – Dynamic Pile Formulae-Limitations- Monotonic and Cyclic Pile Load Tests.-

UNIT-II

Pile groups -Efficiency of Pile Groups- Different Formulae-Load Carrying Capacity of Pile Groups in Clays and Sands – Settlement of Pile Groups in Clays and Sands – Computation of Load on each Pile in a Group.

UNIT-III

Pull-out resistance of piles -Meyerhof's, Vesic's equations and Coyle and Castello correlations for piles in sands (Elastic settlement of piles)-Pull out Resistance of piles - Negative skin friction in piles – Typical field situations – Estimation of downdrag - Neutral point – Methods of minimizing downdrag.

UNIT-IV

Laterally loaded vertical piles - Modulus of subgrade reaction – Piles in granular soils and cohesive soils subjected to lateral loading - Matlock & Reese analysis for piles in sands - Davisson & Gill analysis for piles in clays, Broms' Analysis for piles in sands and clays.

UNIT-V

Drilled pier and Caisson Foundations – Types of Drilled piers – Load carrying capacity of piers in clays and sands, Uplift capacity of piers, Caissons – Types – Pneumatic Caisson – Well Foundations – Design of components – Design of wells – Lateral stability of well foundations
– Terzaghi's analysis.

REFERENCE

1. Principles of Foundation Engineering - Braja M. Das
2. Foundation Analysis and Design – J.E. bowles, McGraw – Hill Publishing Co.,
3. Analysis and design of foundations and Earth Retaining Structures – S. Prakash, Gopal Rajan and Swami Saran – Sarita Prakasan, Merut.
4. Foundation Design and Construction – M.J. Tomlinson, Pitman
5. Soil Mechanics and Foundation Engineering, Vol. II, Foundation Engg., - VNS Murthy
6. Pile Foundation Analalysis & Design by Poulos and Davis.

I Year II Semester	EARTH RETAINING STRUCTURES	L	P	C
		4	0	3

UNIT-I

Earth pressures – Different types and their coefficients- Classical Theories of Earth pressure – Rankine’s and Coulomb’s Theories for Active and Passive earth pressure- Computation of Lateral Earth Pressure in Homogeneous and Layered soils- Graphical solutions for Coulomb’s Theory in active and passive conditions.

UNIT-II

Retaining walls – different types - Type of Failures of Retaining Walls
– Stability requirements – Drainage behind Retaining walls – Provision of Joints – Relief Shells.

UNIT-III

Sheet Pile Structures – Types of Sheet piles – Cantilever sheet piles in sands and clays – Anchored sheet piles – Free earth and Fixed earth support methods – Row’s moment reduction method – Location of anchors, Forces in anchors.

UNIT-IV

Soil reinforcement – Reinforced earth - Different components – their functions – Mechanics of reinforced earth – Failure modes-Failure theories – Design of Embankments on problematic soils.

UNIT-V

Braced cuts and Cofferdams: Lateral Pressure in Braced cuts – Design of Various Components of a Braced cut – Stability of Braced cuts – Bottom Heave in cuts. – types of cofferdam, suitability, merits and demerits – Design of single – wall cofferdams and their stability aspects – TVA method and Cummins’ methods.

REFERENCES

4. Analysis and Design of Foundations and Retaining Structures, Prakash, S – Saritha Prakashan, Meerut.

I Year II Semester	SOIL DYNAMICS AND MACHINE FOUNDATIONS	L	P	C
		4	0	3

UNIT-I

Introduction: Types of motion- SHM- Fundamental definitions- SDOF systems- Free and forced vibration with and without damping- Types of damping-Equivalent stiffness of springs in series and parallel-Principles of vibration measuring devices- Introduction to two and multi degree freedom systems

UNIT-II

Theories of Vibration Analysis- EHS Theory and lumped parameter model- Different modes of vibration- Natural frequency of foundation soil system – Barkan and IS methods – Pressure bulb concept – Reisner Theory – Limitations of Reisner theory – Sung’s solutions — Pauw’s Analogy – Heigh’s Theory.

UNIT-III

Dynamic properties of soils, Determination of E, G and Poisons ratio from field and laboratory tests, recommendations of Indian codes-Stress waves in bounded elastic medium- Use of wave theory in the determination of elastic properties, Elastic coefficients of soils and their determination- damping factor from free and forced vibration tests.

UNIT-IV

Machine Foundations: Classification based on the type of dynamic force and structural form, design data, design criteria, foundations for reciprocating, impact and high speed machined like turbo generators-IS code provisions for the design of the same

UNIT-V

Vibration Isolation and Special Topics: Transmissibility, Principles of isolation- Methods of isolation- Vibration isolators- Types and their characterizes - Liquefaction of soils, Dynamic bearing capacity, Earth retaining structures under dynamic loads-Pile foundations

REFERENCES:

1. Vibrations of Soils and Foundations – Richart Hall and Woods

5. Fundamentals of Soil Dynamics- B M Das
6. Dynamics of bases and Foundations- D D Barkar

I Year II Semester	CONSTRUCTION IN EXPANSIVE SOILS	L	P	C
		4	0	3

UNIT-I

Clay Mineralogy: Nature of soils – Clay mineral structure –Cation exchange – Soil water –Soil structure-Soil-Water interaction -

UNIT-II

Swelling Characteristics: Swelling-factors affecting swelling – swelling potential- swell pressure - Methods of determination – factors affecting swelling potential and swell pressure – Heave - factors affecting heave- methods of determination of heave.

UNIT-III

Foundation Practices in Expansive Clays – Sand cushion – Belled Piers – Granular pile – Anchors - CNS layer technique – Under – reamed pile foundations – Construction techniques – design specifications – Load - carrying capacity in compression and uplift of single and multi – under reamed piles in clays and sands – granular pile Anchors.

UNIT-IV

Expansive Soil Stabilization with lime – Lime soil columns and Lime slurry pressure injection – Stabilization with admixtures –Preponding – Vertical and Horizontal Moisture Barriers.

UNIT-V

Shear strength of expansive soils – Katti's concept of bilinear strength envelope – Stress – state variables in partly saturated soils — Fredlund's strength parameters Determination of matrix suction by axis translation technique Field suction measurement.

	4	0	3

**PAVEMENT ANALYSIS DESIGN AND EVALUATION
(ELECTIVE -III)**

UNIT-I

Pavement Types, Wheel Loads and Design Factors: Definition of Pavement Types, Comparison of Highway pavements, Wheel Loads, Tyre pressure, Contact pressure, Design Factors: Traffic and Loading, Environment, Materials, Failure criteria, Reliability.

UNIT-II

Stresses in Pavements: Layered System Concepts: One Layer System: Boussinesq Theory. Two Layer Theory: Burmister's Theory. Three Layer System. Stresses in Rigid Pavements. Relative Stiffness of Slabs, Modulus of Subgrade Reaction, Stresses due to Warping, Stresses due to Friction, Stresses due to Load, IRC Recommendations.

UNIT-III

Pavement Design: IRC Method of Flexible Pavement Design, AASHTO Method of Flexible Pavement Design, IRC Method for Rigid Pavements, use of Geosynthetics in pavements.

UNIT-IV

Pavement Inventories: Serviceability Concepts, Visual Rating, Pavement Serviceability Index, Roughness Measurements, Measurement of Distress Modes Cracking, Rutting, Rebound Deflection using Benkleman Beam Deflection Method, Load Man Concept, Skid Resistance Measurement.

UNIT-V

Pavement Evaluation: Functional Pavement Performance Evaluation: AASHTO Method, Psycho Physical and Psycho Metric Scaling Techniques, Deduct Value Method.

~~Structural Conditional Evaluation Technique: Benkelman~~ Beam Deflection Method, Pavement Distress Rating Technique. Design of Overlays by Benkelmen Beam Deflection Methods as per IRC – 81 - 1997 – pavements on problematic soils.

5. IRC codes of practice.

CONSTRUCTION PLANNING AND METHODS (ELECTIVE -III)

UNIT-I

Project Management: Planning – Scheduling – Control – Bar chart – Milestone charts – Development of CPM and Pert networks – Time Estimates – Evaluation of Project duration – Cost Analysis – Updating
– Crashing and Resource Allocation.

UNIT-II

Equipment: Equipment Economics – Cost of Owning and operating – Earth moving equipment – Dozers – Scrapers – graders – shovels – hoes – loaders – clamshell buckets – Draglines – Cranes

UNIT-III

Trucks and Handling Equipment: Rear dump trucks – Capacities of trucks and handling equipment – calculation of truck production – compaction equipment – types of compaction rollers – quality control
– soil stabilization

UNIT-IV

Aggregate production: Crushers – Jaw Crushers – Gyratory crushers
– impact crushers – selection of crushing equipment – screening of aggregate – concrete mixers – mixing and placing concrete – consolidating and finishing.

UNIT-V

Project Budgeting: Introduction – Project costs – types of costs – Accuracy and timing of cost estimates – methods of crushing costs – cost control – cost inflation – escalation and contingencies.

GEOTECHNICAL EARTH QUAKE ENGINEERING (ELECTIVE –III)

UNIT-I

Earthquake Seismology: Introduction — Seismic waves - Causes of earth quake - Continual drift and Plate tectonics – Earthquake fault sources – Faults, fault geometry, fault movement - Elastic Rebound Theory – Location of Earth Quakes - Quantification of Earthquakes – Intensity and magnitude – Earthquake Energy.

UNIT-II

Earthquake ground motion: Seismograph - Characteristics of Ground motion: - Ground motion parameters – Amplitude Parameters – peak acceleration, peak velocity, peak displacement other amplitude parameters – Frequency content parameters – ground response spectra, Fourier spectra, Power spectra, response spectra – spectral parameters – duration. Local site Specification and Code based design.

UNIT-III

Dynamic Soil Properties: Representation of Stress conditions by the Mohr Circle – Measurement of Dynamic properties – field, laboratory, interpretation of observed ground response — One dimensional response analysis - linear approach, E equivalent linear approach.

UNIT-IV

Liquefaction and Lateral Spreading – Liquefaction Related phenomena - Liquefaction susceptibility – Initiation of Liquefaction
– Effect Liquefaction – Remedies on Seismic hazards – Densification
– Reinforcement – Grouting and mixing Techniques – Drainage Techniques

UNIT-V

Seismic Design of Foundation, Slopes and Retaining Structures:

Seismic Design requirements for Foundation – Seismic Bearing capacity - Seismic Settlement
— Internal stability and weakened instability of

slopes - Seismic design of retaining walls: Dynamic Response of Retaining walls - Seismic Displacement of Retaining walls -Seismic Design Considerations.

1. “Geotechnical Earth Quake Engineering” by SL Kramer, Pearson Education.
2. “Earth Quake” W.H. Freeman, New York.

I Year II Semester		L	P	C
		4	0	3

GEO-ENVIRONMENTAL ENGINEERING
(ELECTIVE – IV)

UNIT-I

Introduction to Ground water contamination, pollutant transport and ground water remediation. Sources and Types of ground water contamination – introduction – under ground storage tanks, Land fills, surface impoundments, waste disposal injection wells, Septic system, Agricultural wastes, Land application, radioactive contamination, other sources of contamination.

UNIT-II

Data Collection methods: Introduction, Geological data acquisition – Drilling methods – Solid flight auger drilling – Hollow stem auger drilling – Wet rotating drilling – Hand auger soil boring – sample collection – Soil core logging – Cone penetration testing – Geophysical methods; Hydrologic data acquisition – monitoring well construction – well material – Screen interval selection – Installation procedure – Survey specification – Protective casing requirements – Well development procedures; Acquisition of soil and Ground water quality data.

UNIT-III

Contaminant Transport Mechanisms: Introduction – Advection process – Diffusion – Dispersion process – Diffusion – Mass transport Equations : Derivation of advection dispersion equation for solute transport; One Dimensional Models – Continuous source in one dimension – Instantaneous source in one dimension – Adsorption effects – Transport in one dimensional with first order decay – Sorption: The concept of sorption, Factors influencing sorption – Contaminant characteristics, Soil characteristics, Fluid media characteristics. Sorption Isotherm: Linear sorption Isotherm –

Freundlich Sorption isotherm – Langmuir Sorption Isotherm, Sorption effects on fate and transport of pollutants.

UNIT-IV

Flow and Transport of Pollutants in Unsaturated zone: Capillarity, soil-water characteristic curves, Unsaturated Hydraulic conductivity, Governing equation for unsaturated flow, measurement of soil properties.

UNIT-V

Non – Aqueous Phase Liquids (NAPLs): Introduction – Comparison of fate of dissolved mass versus NAPL mass- Types of NAPLs – LNAPL – DNAPL; NAPL Transport – general process – NAPL transport at the pore level - Downward Migration of DNAPLs in saturated zone – NAPL movement through Vadose zone – LNAPL behaviour at the water table – NAPL

Transport at the site level – LNAPL conceptual models – DNAPL conceptual models, NAPL transport.

TEXT BOOKS:

1. Ground water Contamination (Transport and Remediation) By Philip. B. Bedient, Hanadi, S. Rifai & Charles. J. Newell, Prentice Hall PTR, Upper Saddle River, NJ07458.

REFERENCES

2. Geotechnical Engineering by Gulahati, S.K. and Datta, M. – Tata McGraw Hill Publishing Company
3. Geotechnical Engineering Principles and Practices by Coduto – Pearson Education (PHI)
4. Geoenvironmental engineering by Reddy, L.N and Inyang, I.H. – Marcel Drekker, 2000.
5. Environmental geotechniques by Sarsby, R. – Thompson Telford, 2000.
6. Geotechnical Practices for Waste Disposal by Daniel, D.E., 1993.

NUMERICAL METHODS IN GEOTECHNICAL ENGINEERING (ELECTIVE – IV)

UNIT- I

Introduction: Categories of Problems in Geo-technical Engineering, Finite Difference Method, Boundary Corrections for Grids. Accuracy, Convergence and Stability. Idealization of soil behaviour; Linear, Bilinear and multi-linear, Hyperbolic, Spline function, Ramberg – Osgood's Model, Polynomials, Higher order elastic models, perfect plasticity, frictional. Elastic models of soil behaviour – The winkler – Filenenko-boroditch – Pasternak – Ressiener models.

UNIT- II

Seepage: Finite Difference Solution to Laplace equation for Homogeneous and Layered Soils.

UNIT-III

Consolidation: Finite Difference Solution for One Dimensional, Two and three dimensional consolidations. Multi layered systems. Consolidation of Ground for Construction Load and Static Load.

UNIT-IV

Shallow Foundations: Beams on Elastic foundations, solution by Finite Difference and – Finite Element Method (Direct Approach) Limit analysis, Lower Bound and Upperbound theories Method of Finite difference solution of Raft foundations.

UNIT-V

Pile Foundation: Pile Stresses – Static loading – Finite Element Method Solution (Direct approach) of the pile static pile capacity- wave equation — Lateral piles by Finite Element Method (Direct Approach) and Finite Difference method.

6. Elastic Analysis of Soil – Foundation Interaction, APS Selvadurai – Elsevier
7. Pile Foundation Analalys & Design by Poulos and Davis.

FINITE ELEMENT METHOD (ELECTIVE – IV)

UNIT- I

Introduction: Review of stiffness method- Principle of Stationary potential energy-Potential energy of an elastic body- Rayleigh-Ritz method of functional approximation - variational approaches -weighted residual methods

UNIT- II

Finite Element formulation of truss element: Stiffness matrix- properties of stiffness matrix – Selection of approximate displacement functions-solution of a plane truss- transformation matrix and stiffness matrix for a 3-D truss- Inclined and skewed supports- Galerkin's method for 1-D truss – Computation of stress in a truss element.

UNIT- III

Finite element formulation of Beam elements: Beam stiffness-assembly of beam stiffness matrix- Examples of beam analysis for concentrated and distributed loading- Galerkin's method - 2-D Arbitrarily oriented beam element – inclined and skewed supports – rigid plane frame examples

UNIT- IV

Finite element formulation for plane stress, plane strain and axisymmetric problems- Derivation of CST and LST stiffness matrix and equations-treatment of body and surface forces-Finite Element solution for plane stress and axisymmetric problems- comparison of CST and LST elements –convergence of solution- interpretation of stresses

UNIT- V

Iso-parametric Formulation: An isoparametric bar element- plane bilinear isoparametric element – quadratic plane element - shape functions, evaluation of stiffness matrix, consistent nodal load vector - Gauss quadrature- appropriate order of quadrature – element and mesh instabilities – spurious zero energy modes, stress computation- patch test.
